

# 5 Things You Need To Know Before You Buy Edtech

Anne-Marie Scott

#OTESSA23

# 5 Things <sup>*I think*</sup> ^ You Need To Know

1. Edtech is big business
2. Edtech is not a tool
3. Edtech is not neutral
4. Edtech is killing us
5. Edtech procurement is broken

# Your Experience

# Edtech is big business

---

There are a variety of economic interests influencing the technologies we use.

# Making Markets

*“The intentions of financial investors are necessarily not the same as those of educators, governments and students, and yet they are seeking to become central to directing flows of investment in the education arena.”*

Keri Facer, Futures in education: Towards an ethical practice  
(<https://unesdoc.unesco.org/ark:/48223/pf0000375792>)

EdTech VC's new normal. \$1.1B of Venture Funding for Q1 2023.  
\$3.5B forecast for the full year, down 67% on 2022 and down 83% on 2021.

Global Education Venture Capital Funding, 2010 – Q1 2023 in USD Billions

# Digital Transformation

*“Multidisciplinary teams, incorporating traditional corporate roles and digital skills, are essential for successful digital institutions”*

Greenway, Andrew; Terrett, Ben; Bracken, Mike. Digital Transformation at Scale: Why the Strategy Is Delivery . London Publishing Partnership.

Thanks for sharing the the first draft of your 'Education Tech Map' Ray Bell you've been working on with schools & colleagues  
We'd love any feedback

- ? Have we missed anything ?
- ? Is this the right terminology ?
- ? how is this #PedTechMap useful for you ?

# Supporting Growth

## **New Offerings**

Partly / Fully online programmes  
Micro-credentials  
Joint degrees  
Corporate learning

## **Existing Offerings**

Remove barriers to access  
Develop staff and student digital understanding  
Sustainable international experiences  
Support a global student cohort

## **New Learners**

Distance learners  
International learners  
Work based learners  
Life-long learners  
Learners at partner institutions

Edtech companies have a vested interest in influencing institutions and making markets for edtech.

Institutions have vested interests in edtech to support digital transformation visions.

# Edtech is not a tool

---

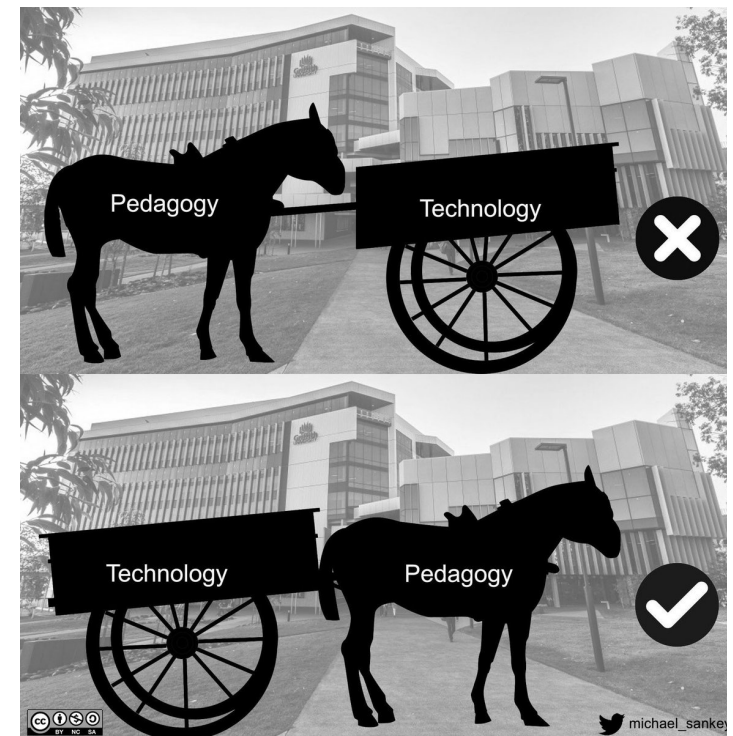

**The technologies we use are matters of quality.**

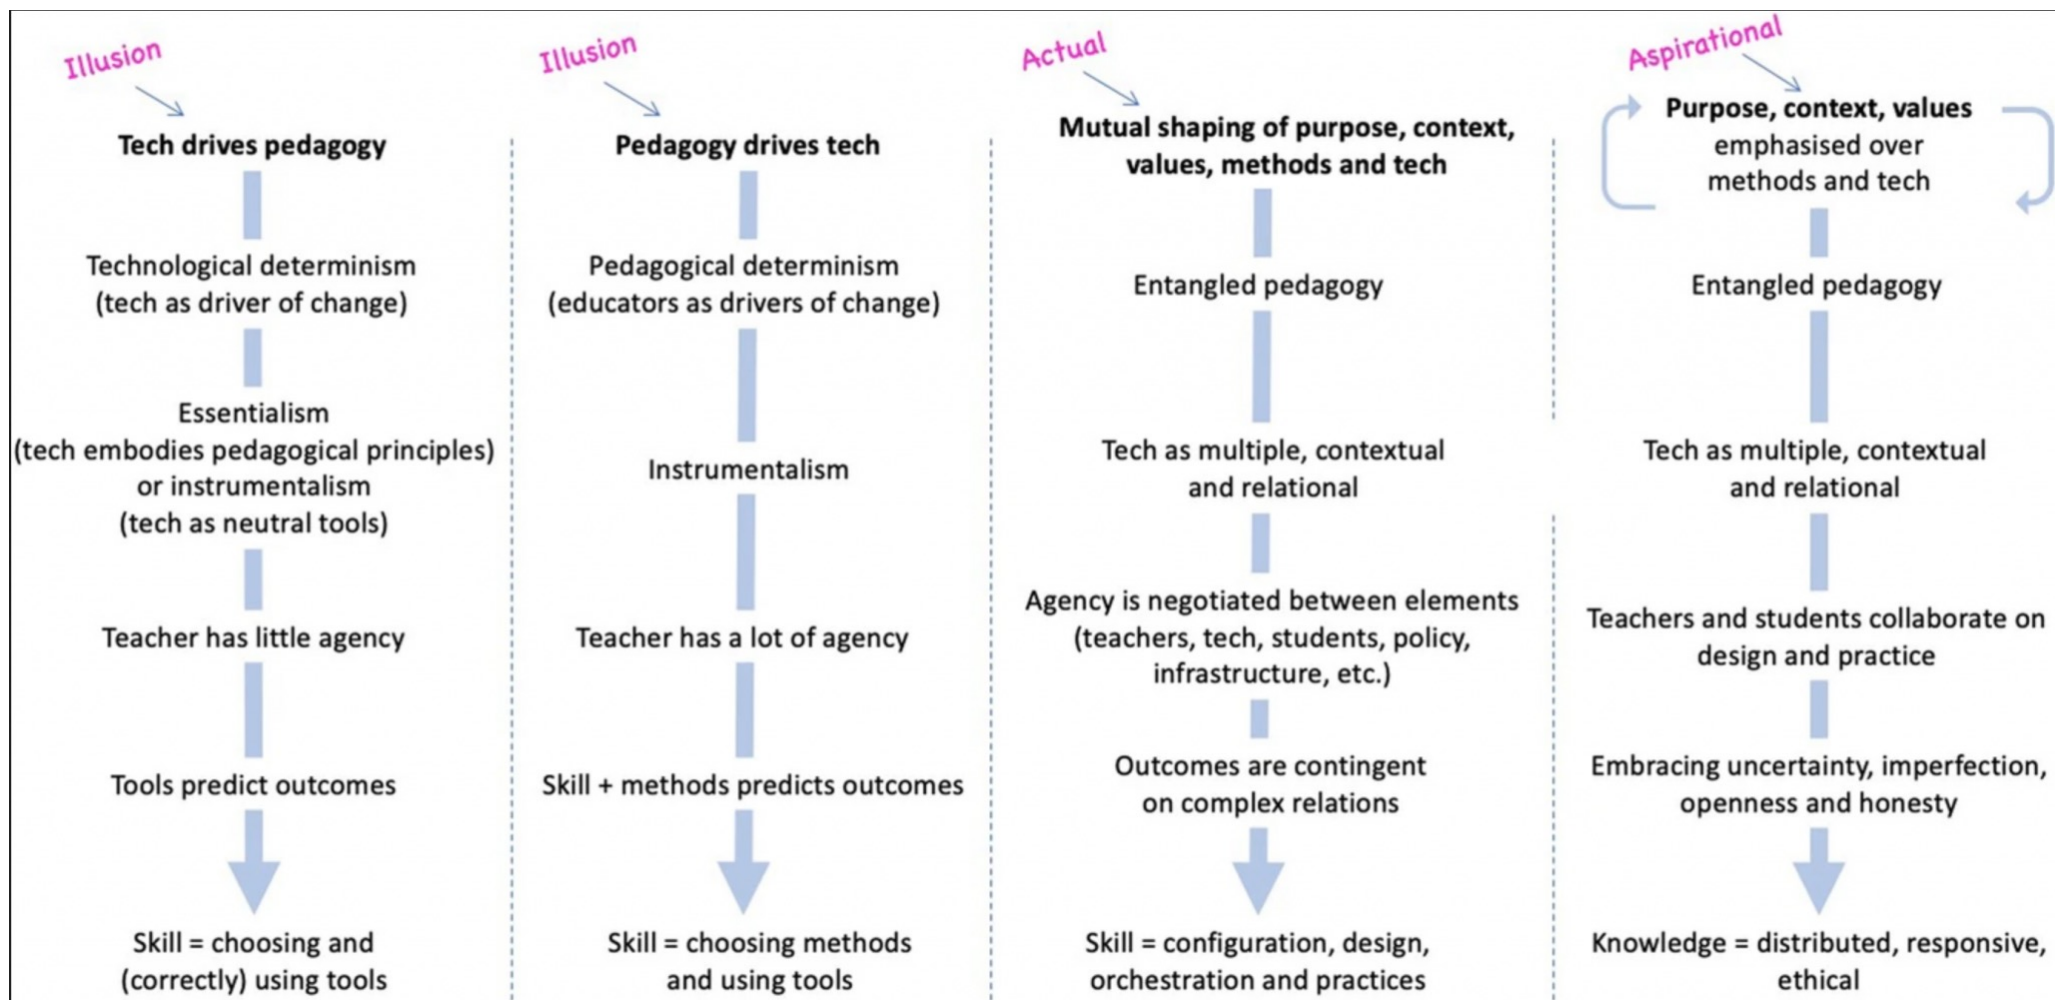

# Entanglements

*“As researchers and practitioners of digital education, we need to move away from our over-emphasis on how technology acts on education, or how education can best act on technology. Let us rather acknowledge that the two are co-constitutive of each other, entangled in cultural, material, political and economic assemblages of great complexity.”*

Bayne, S. (2014) What's the matter with 'Technology Enhanced Learning'?  
Learning, Media and Technology, DOI:  
10.1080/17439884.2014.915851. <https://doi.org/10.1080/17439884.2014.915851>  
[851](https://doi.org/10.1080/17439884.2014.915851)

Fawns, T. An Entangled Pedagogy: Looking Beyond the Pedagogy—Technology Dichotomy. *Postdigit Sci Educ* 4, 711–728 (2022). <https://doi.org/10.1007/s42438-022-00302-7>

Good use of educational technology is not as simple as picking the right technology and training people on how to use it.

Quality assurance processes needs to extend beyond what we do within educational technology systems to how we choose them in the first place.

# Edtech is not neutral

---

**Edtech is driven by political ideologies of what education is about and for, and is not an ethics free zone.**

# Politics

---

*“The rise of edtech is underpinned by ideology: Edtech is financially driven, adheres to privatisation of longstanding public structures, desires automated or prepackaged contents and processes, and envisions technology as a solution in and of itself.”*

Veletsianios, G., & Moe, R. (2017, April 10). *The Rise of Educational Technology as a Sociocultural and Ideological Phenomenon*. Educause Review. <https://er.educause.edu/articles/2017/4/the-rise-of-educational-technology-as-a-sociocultural-and-ideological-phenomenon>

## **6 Reasons Why Higher Education Needs to Be Disrupted**

by Tomas Chamorro-Premuzic and Becky Frankiewicz

Edtech is complicit in narratives of disruption and presented as a “solution” to a problem.

Ethics are a structural consideration in one area of education, and a risky business to engage with in another.

# Edtech is killing us

---

**We live in a period of edtech excess that is fuelling increasing disadvantage and climate crisis.**

is digital education part of a realistic **'liveable future'** ... or even just a **'survivable planet'**... and, if so, in what form?

2022-06-23 09:38:40

Talk by Neil Selwyn, given to Centre for Research in Digital Education at University of Edinburgh: [Studying digital education in times of climate crisis: what can we do?](#)

# Less tech, more just outcomes

---

Where does OER fit?

What about our commitments to reconciliation (which has to include responsible use of natural resources)?

Just how do we reach some of the most marginalised learners in Canada?

# Ecocritical Awareness

---

*“This observation means that the reorientation of the field of educational technology to reconceptualize it’s relationship with the environment is inherently bound up with its relationship to social justice in a globalized world.”*

Werse, N. R. (2023). The quest to cultivate an ecocritical awareness in educational technology scholarship: A question of disciplinary focus in the age of environmental crisis. *British Journal of Educational Technology*, 0, 1–17.  
<https://doi.org/10.1111/bjet.13327>

# Digital Literacies

---

“It is clear that academics and policy makers are committed to the development of digital literacy, and much work has been done to progress the field over the past number of decades. However, it appears that the impact of users’ digital lives on the environment has been largely left out of the debate and area of focus”.

Tiernan, P. (2022). Gently down the stream(ing): Can digital literacy help turn the tide on the climate crisis? *Nordic Journal of Digital Literacy*, 17(3), 182–189. <https://doi.org/10.18261/njdl.17.3.4>

Should we be assessing the environmental footprint of our courses as a design and quality assurance activity much like might assess accessibility?

Do we need more edtech?

# Edtech procurement is broken

---

We lack robust frameworks to help us navigate this territory within edtech procurement.

# What's missing?

---

What is driving procurement?

Who benefits, and what are the costs (beyond financial)?

Can claims of efficacy be validated?

Risks of harm to staff and students?

Sustainability?

# Good Education

---

[www.menti.com](http://www.menti.com)

3962 9934

**We have often given more ethical consideration to how we procure teabags than we have technology.**

# Bigger problems

- As public procurement accounts for a substantial portion of the taxpayers' money (approximately 12% of GDP and 29% of government expenditure in OECD member countries), governments are expected to carry it out efficiently and with high standards of conduct in order to ensure high quality of service delivery and safeguard the public interest.

(<https://www.oecd.org/governance/ethics/public-procurement.htm>)

Are we measuring what's easy to measure?

Are we assessing risk appropriately?

# Solutions

---

## Framework for Ethical Learning Technology (FELT)

([https://www.alt.ac.uk/news/media\\_releases/launching-alt%E2%80%99s-framework-ethical-learning-technology-felt](https://www.alt.ac.uk/news/media_releases/launching-alt%E2%80%99s-framework-ethical-learning-technology-felt))

# Solutions

- Education stakeholders need a standard to understand and choose edtech products with ease
- There is a lack of benchmarks and standards across the edtech sector at national levels
- Unregulated market increases the liability risks for schools
- Roles and responsibilities with regards to edtech products remain unclear
- Schools do not necessarily have the expertise and they cannot always afford it
- There is a need for all edtech companies to adhere to commonly agreed policies, terms and conditions within national contexts
- Edtech products should be licensed to operate in educational institutions

Hillman, V. (2022) Edtech procurement matters: it needs a coherent solution, clear governance and market standards, Social Policy Working Paper 02-22, London: LSE Department of Social Policy.

# Embrace Constraints

---

“Constraints are not the forces of regression or punitive restriction we tend to think of them as...Their apparent limitations force us to question, surface, and challenge assumptions that, while they might have been reasonable once, are no longer useful strategic foundations for us.”

Morgan, A & Barden (2015) *A Beautiful Constraint: How To Transform Your Limitations Into Advantages, and Why It's Everyone's Business*, Wiley
